

PATHWAYS & PARKS

Location: Mexico City, Mexico

Lighting Agent: [Industria Rocava](#)

Products used: Carmanah EverGEN™ 340 solar LED lights

Benefits: Lengthened the number of hours the Parque Caneguin could be used each day while simultaneously keeping the park fully sustainable and decreasing set-up costs.

PATHWAYS & PARKS

Project Overview: Parque Caneguin is a popular and fully sustainable urban park in the Argentina Antigua neighborhood of Mexico City. The park is a recognized Mexico City Heritage Site containing 5 playgrounds, a gym, jogging pathways, and a community hall. As a key part of the neighborhood, the ability for the park to remain open well into the night due to the lighting provided by 23 Carmanah EverGEN™ 340 solar LED lights was welcomed with open arms.

In partnership with Sol lighting agent Industria Rocava, the city chose the EverGEN™ series lights due to their lighting performance, aesthetic design, and cost savings achieved during installation. Sol was able to illuminate the entire park with an off-grid system that eliminates the need to run cable, resulting in a faster and cheaper installation process.
